

Rocket® Enterprise Orchestrator

Go Beyond Traditional Workload Automation: Orchestrate and Automate Your Entire DevOps Toolchain

Now more than ever, you must deliver value to customers with high quality, velocity, and efficiency. This requires end-to-end automation across your DevOps value streams that are crucial for efficient customer delivery. Rocket Enterprise Orchestrator enables you to automate and orchestrate end-to-end development and operations tasks across operating systems, platforms, and business applications — including Jira, Kubernetes, Jenkins, SAP and more. It unifies your DevOps strategy with the tools and applications already in place to maximize existing investments.

Enterprise Orchestrator integrates with password managers and integrates with your tasks including Cyberark and [others](#).

With the Rocket® AI Predictive Pulse add-on, enhance Enterprise Orchestrator with proactive decisioning and strategy recommendations that prevent costly errors, delays, and missed SLAs, ensuring your operations remain seamless.

Benefits/Features

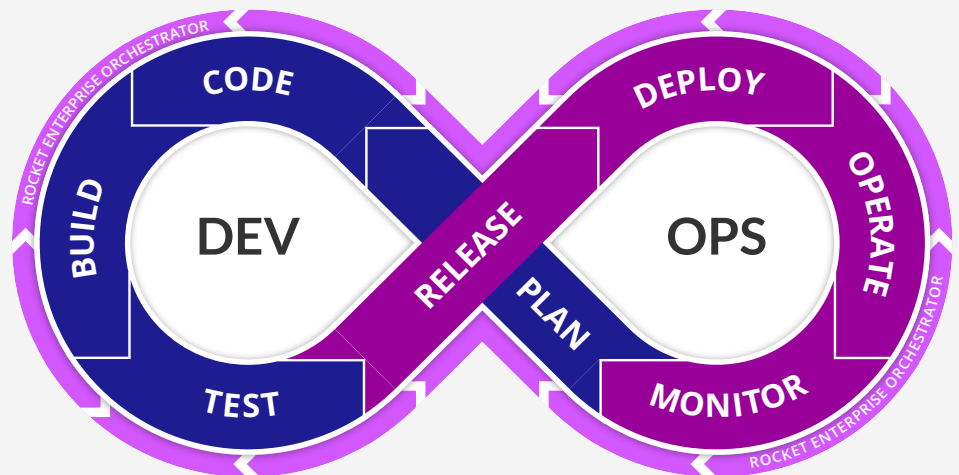

-  Establish design-time configuration of DevOps value streams, meeting the needs of development and delivery teams.
-  Manage and monitor run-time execution of value streams, equipping administrators with dashboard, logs, notifications, and high availability.
-  Span mainframe to cloud with the capability to distribute work across the entire IT ecosystem, including hybrid cloud environments and sysplex awareness on mainframes.
-  Define and use variables across the system to make reusable, highly customized, and complex workflows.
-  Specify critical branching for tasks with an infinite number of conditions to ensure automation flows meet business requirements.

With Rocket® Enterprise Orchestrator you can:

-  **Optimize Software Development and Delivery**
Increase quality, velocity, and efficiency in DevOps value streams.
-  **Extend DevOps Collaboration**
Align IT and the business across teams and technologies.
-  **Elevate DevSecOps**
Build security into every step of your DevOps value streams.
-  **Increase Enterprise Agility**
Easily shift workloads between technology stacks.
-  **Increase Workload Throughput**
Visualize and manage the execution of thousands of workloads from a customizable dashboard.
-  **Automate Decisioning and Recommendations**
With the Rocket AI Predictive Pulse add-on, Rocket Enterprise Orchestrator enables you to get a constant pulse on your workload automation and DevOps initiatives through predictive intelligent analytics that prevent human errors, delays, and missed SLA's.

Rocket Enterprise Orchestrator

Rocket Enterprise Orchestrator advances traditional workload automation by including DevOps pipelines that automate value streams across complex IT ecosystems.

Modernization. Without Disruption.™
