Application Modernization and Connectivity

Value profile service

Understand the best modernization options for your business through our complementary service

Value Profile Service

The rules of business — and public sector — are quickly being rewritten as new technologies, business models, and customer expectations force organizations to rethink their IT strategies. Digital transformation (DX) has become an enterprise imperative. Rocket Software® is currently helping 40,000 companies digitally transform, including 98 of the Fortune 100 worldwide. We have learned that no IT landscape is identical, and there can be no "one size fits all" approach to delivering digital transformation.

That is where the Rocket Software Value Profile Service will help. It is the first step on the digital transformation journey.

Service offering

The Value Profile Service is available to clients who have already heard from Rocket Software about modernization, and are interested to take discussions to the next level. The Value Profile Service takes the concept of modernization and maps it out in your own IT context, by looking at your own IT landscape and providing advice on potential solutions.

The service includes some preparatory steps with a short set of initial questions, a detailed on-site or virtual set of meetings, followed by a short report approximately a week later containing Rocket Software overall recommendations. Our report will highlight where we have identified application areas where a focused modernization exercise could transform business operations and yield significant value in the shortest time frame.

This Value Profile Service is provided free of charge to all qualifying clients.

Determine the best course of action with the help of our subject matter experts in modernization

Approach and scope

In preparation for the Rocket Software visit, we will submit a short set of questions ahead of time to help you prepare for the day. These are preparatory questions regarding your IT landscape that will help shape discussions.

We will then spend time with your technical and business leaders to find out more about the core business systems applications that support your critical day-to-day operations. For example, core COBOL applications that run on the IBM® mainframe, or another enterprise server. Specifically, we would want to spend time with the following functional experts at your organization:

- Application Subject Matter Experts — Applications, technology, interfaces

- Development Team Manager — Development process, tools, test environments

- DBAs — Data types, volumes, storage requirements

- Architects / Platform Administrators — Target platform strategy standards

Upon successful completion of the Value Profile Service, Rocket Software will produce a short report of our findings and recommendations, which we will arrange to present to you approximately a week later.

More details

Typically, clients interested in a Value Profile Service will be faced with a complex IT landscape, plus a variety of modernization options in the areas of platform, user interface, analysis, testing and the application development lifecycle.

Covered Rocket Software solutions in the Value Profile:

- COBOL

- Mainframe

- Host Connectivity

To learn more about how Rocket Software can help with your modernization journey, take a look at our Modernization Maturity Model. This model provides a best-practice approach for enterprise modernization projects. Introduced as a practical framework for success, the Rocket Software Modernization Maturity Model aims to provide a mapping from the initial business drivers behind the change requirements, through a technical strategy towards appropriate tactical options.
